SECTION 1 General information

- A. Supported configurations/platforms
- B. Supported toolsets
- C. Supported hardware debugger/programmers

SECTION 2 Version history

SECTION 3 Known limitations

---

SECTION 1 General information

---

A. Supported configurations/platforms

IoTize Studio operates on Windows 10, Windows 8, Windows 7 and Windows Vista (all 32 and 64-bit).

Other versions of Windows, including Windows 2000, Windows XP, Windows XP 64-bit and Windows Server, are not supported.

Administrative rights are required in order to install this software.

Only native versions of Windows are supported. Emulators such as VMware, QEMU, Citrix, Wine, Xen (or others) are not supported.

All software and documentation are provided in English only.

---

SECTION 2 Version history

---

IoTize Studio 1.18.18.0208 (Released 2018/07/27)

---

Improvements:

- . Revamp of HTML generation system.

IoTize Studio 1.16.18.0061 (Released 2018/03/02)

-----  
Improvements:

- . New installer.
- . Rewrite user documentation, online and contextual.
- . Add management for TAP types (TAPNPass / TAPNLink)
- . Add S3P to Sensor Demo example.

Fixes:

- . Limit Login retries to avoid Login Freeze.
- . Several minor fixes. (display, ...)

IoTize Studio 1.14.17.0355 (Released 2017/12/21)

-----  
Improvement:

- . Config version auto increment turned to false by default.

Fix:

- . Fixed possible crashes while analyzing ELF information.

IoTize Studio 1.12.17.0354 (Released 2017/12/19)

-----  
Fix:

- . VFP-v3 registers weren't supported by the ELF loader leading to an IoTizeStudio crash.

IoTize Studio 1.10.17.0333 (Released 2017/11/29)

-----  
Fix:

- . New project creation wasn't possible.

IoTize Studio 1.08.17.0326 (Released 2017/11/22)

-----

Version for TapNLink Primers.

IoTize Studio 1.06.16.0158 (Released 2016/06/06)

-----

Fixes:

- . variable selection was not correct after drag and drop.
- . FTP failed with WiFi internet connection.
- . display of large variable structures is limited to 100 items.

Improvements:

- . added ACS driver installation.
- . S3P files reorganization.
- . added S3P templates.
- . development kit and API's documentation improved.

IoTize Studio 1.04.16.0050 (Released 2016/02/19)

-----

Fixes:

- . sources files was missing after ELF extraction.
- . saved log file path was not correct.

Improvements:

- . added Modbus target protocol.
- . added IO target protocol.
- . new html page style.
- . user can provide its own file for Html pages styles (.css file).

IoTize Studio 1.02.16.0012 (Released 2016/01/12)

-----  
Fixes:

- . fixed crash when no IoTize on reader.
- . fixed variable properties synchronization between different views.
- . fixed miscellaneous crashes when manipulating variables, bundles...
- . improve error management and reporting.
- . corrected property names and helps.
- . fixed various minor bugs.

Improvements:

- . added Users management as sub group of profiles.
- . added float and unsigned format for HTML display.
- . added management of different levels of log in output window and log file.
- . changed "new" wizard dialog.
- . added JavaScript and Android API's documentation.
- . made various corrections in documentation.
